ELECTRONIC COMMERCE WEBSITE

INTRODUCTION

- Online Shopping is a lifestyle e-commerce web application, which retails various fashion and lifestyle products. This project allows viewing various products available enables registered users to purchase desired products instantly using PayPal payment processor. This project provides an easy access to Administrators and Managers to view orders placed using Instant Pay options.

OBJECTIVE

The main objective of the study is to develop an online e-commerce system. The system aims to achieve the following objectives:

- To design an online e-commerce system.
- To provides a solution to reduce and optimize the expenses of customer order management.
- To create an avenue where people can shop for fashion products online.
- To develop a database to store information on fashion products and services.

This project is mainly divided into two main categories:

The Administrators

and

the Customers/Users.

ADMINISTRATOR

- The store manager and the staff members operate as the administrators. They can add, edit, update products or delete products thus they able to change the names of products, change prices and add or remove products.

FUNCTIONAL REQUIREMENTS - ADMIN MODULE

- Admin can provide username, password and login to the admin panel.
- After login, there is a dashboard where admin can see how many customers is registered, how many products are there for sale, how many orders placed.
- Admin can add/delete/view/edit the products.
- Admin can view/edit/delete customer details.
- Admin can view/delete orders.
- Admin can change status of order (order is pending, confirmed, out for delivery, delivered)

CUSTOMER/USER

- The customer can search for products selection, update the cart, remove products from the cart and check out from the shop. The customer is also able to update his information such as names, address and other data.
- The User is only able to browse the online shop and add a product to the cart. The user is limited to the use of the shop.

FUNCTIONAL REQUIREMENTS - CUSTOMER MODULE

- Customer can view/search products without login.
- Customer can also add/remove product to cart without login (if customer try to add same product in cart. It will add only once)
- After creating account and login to system, he/she can place order.
- If customer click on pay button, then their payment will be successful and their order will be placed.
- Customer can check their ordered details by clicking on orders button.
- Customer can see the order status (Pending, Confirmed, Delivered) for each order
- Customer can Download their order invoice for each order

ADDITIONAL REQUIREMENT

- Additionally, if customer places order and admin deleted that user (fraud detection), then their orders will automatically be deleted. Suppose one (1) customer places four (4) products order and admin deleted two (2) product from website, then that two-product order will also be deleted and other two will be there. Also, if user click on purchase button without having products in their cart, then website will ask to add product in cart first.

NON-FUNCTIONAL REQUIREMENTS

- **Availability:** The system should remain operational in any day and any place.
- **Accuracy:** There is a need to optimize the system to ensure more accurate results and calculations.
- **Usability:** The system should provide a User-friendly user interface and tooltips to enhance itself and be effectively responsive.
- **Secure:** The system must be able to provide security against any external injections by using a layered security system. Implementation of user login functionalities also ensures the system is secure from unauthorized persons.
- **Performance of the system:** Response time is very good for given piece of work. The system will support multi user environment.
- **Reliability of the system:** The system will be highly reliable and it generates all the updates information in correct order. Data validation and verification is done at every stage of activity. System recovery will also be speed.

USE-CASE DIAGRAM

FLOW CHART

DATA FLOW DIAGRAMS

DATABASE TABLES

ENTITY RELATIONSHIP - DIAGRAM

TECHNOLOGY USED FOR DEVELOPING THE SOFTWARE

Hypertext Mark-up Language (HTML)

- HTML is the standard mark-up language for documents designed to be displayed in a web browser. HTML describes the structure of a Web page.

Cascading Style Sheets (CSS)

- Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a mark-up language such as HTML

TECHNOLOGY USED FOR DEVELOPING THE SOFTWARE

Bootstrap

- Bootstrap is a free and open-source CSS framework directed at responsive, mobile-first front-end web development.

JavaScript

- JavaScript often abbreviated JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS.

TECHNOLOGY USED FOR DEVELOPING THE SOFTWARE

Python

- Python is a high-level, interpreted, dynamically-typed, general-purpose programming language. It supports multiple programming paradigms, including structured (particularly procedural), object-oriented and functional programming.

Django

- Django is an open-source web framework written in the Python programming language. Its "batteries-included" approach means a powerful website can be generated quickly in the hands of a skilled developer.

TECHNOLOGY USED FOR DEVELOPING THE SOFTWARE

SQLite

- SQLite is a software library that implements a small, fast, high-reliability, full-featured, self-contained, serverless, zero-configuration and transactional SQL database engine. SQLite is the most widely deployed SQL database engine in the world. The source code for SQLite is in the public domain.

STRUCTURE OF THE PROJECT FILES

Model View Controller or MVC as it is popularly called, is a software design pattern for developing web applications.

- **Model** - The lowest level of the pattern which is responsible for maintaining data.
- **View** – This is responsible for displaying all or a portion of the data to the user.
- **Controller** - Software Code that controls the interactions between the Model and View.
